Transform
your bathroom

Design unlimited

The Geberit system offers unlimited creative opportunities to transform your bathroom. The wall-hung system lets you play about with your design, allowing you to place your toilet against a new partition – creatively dividing space – or against an existing wall, whatever you want. It gives you the freedom to design your perfect bathroom, regardless of whether it's a new building project or the modernisation of an existing bathroom. And because the pipes and toilet cistern are hidden within the wall, your bathroom will feel more spacious. All this makes it an attractive, elegant solution with simple, easily cleaned lines.

Breathe new life into
your bathroom

Bathroom before renovation

Nobody enjoys using a bathroom that has seen better days, but the task of transforming it into a functional room you actually enjoy using can seem impossible. The Geberit Sanitary system changes all this, making it possible to position components in any part of the bathroom while hiding unsightly piping. At the same time, the system's flexibility and adaptability allow you free rein to create an individual style – how about creating recesses for keeping your toiletries or shower radio in? Or designing the wall low enough to put your plants on? It simply gives you more options and, with the WC up off the floor and its cistern hidden, your bathroom will seem even larger.

A great skeleton to have
in your closet

Have a good look now,
because you'll never see it
again. You're looking at the
skeleton of your new bath-
room – the Geberit system –
with its quick and easy frame
installation, which supports
all kinds of sanitaryware
from washbasins to toilets.
The WC frame includes a
6/3 litre dual-flush cistern
that provides considerable
water savings and operates
efficiently and quietly. That's
good sense. That's Geberit
Know-How Installed.

Strong aesthetics

Using your toilet shouldn't be a balancing act – not when you have a wall-hung solution that gives unwavering strength. Designed to support 400 kilos, the internal structure is tough and long-lasting, but all you see on the other side of the wall is easy-on-the-eye

elegance, clean spaces and a seat you don't have to be afraid to use. The Geberit system is not an optical illusion – it's simply beauty and strength in one.

Find your own style

The beauty of the pre-wall concept is that you can cover its skeleton in any material you like to create your own bathroom style. Whether you're inspired by, say, the classic lines of Art Deco, Japanese minimalism, or the Scandinavian look, as pictured here, your wall-hung toilet will fit seamlessly in. The decision is yours

– the pre-wall provides a broad palette for you to work from, with a toilet that compliments the final look.

Choose freedom

Banish unhygienic surfaces from your bathroom with a wall-hung solution. By lifting the toilet off the floor, you prevent dirt and grime from collecting in all those nooks and crannies, leaving you with a feeling of sweeping space and a floor that offers effortless cleaning.

This is the Geberit system, where less gives you more – aesthetic surfaces and room to design. Savour your newfound freedom.

Adapts to its environment

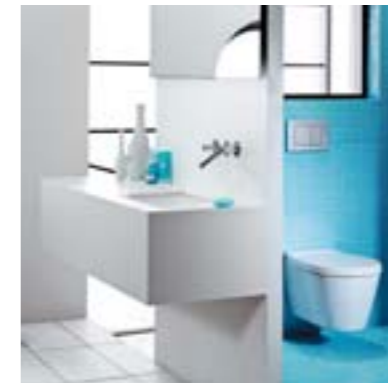

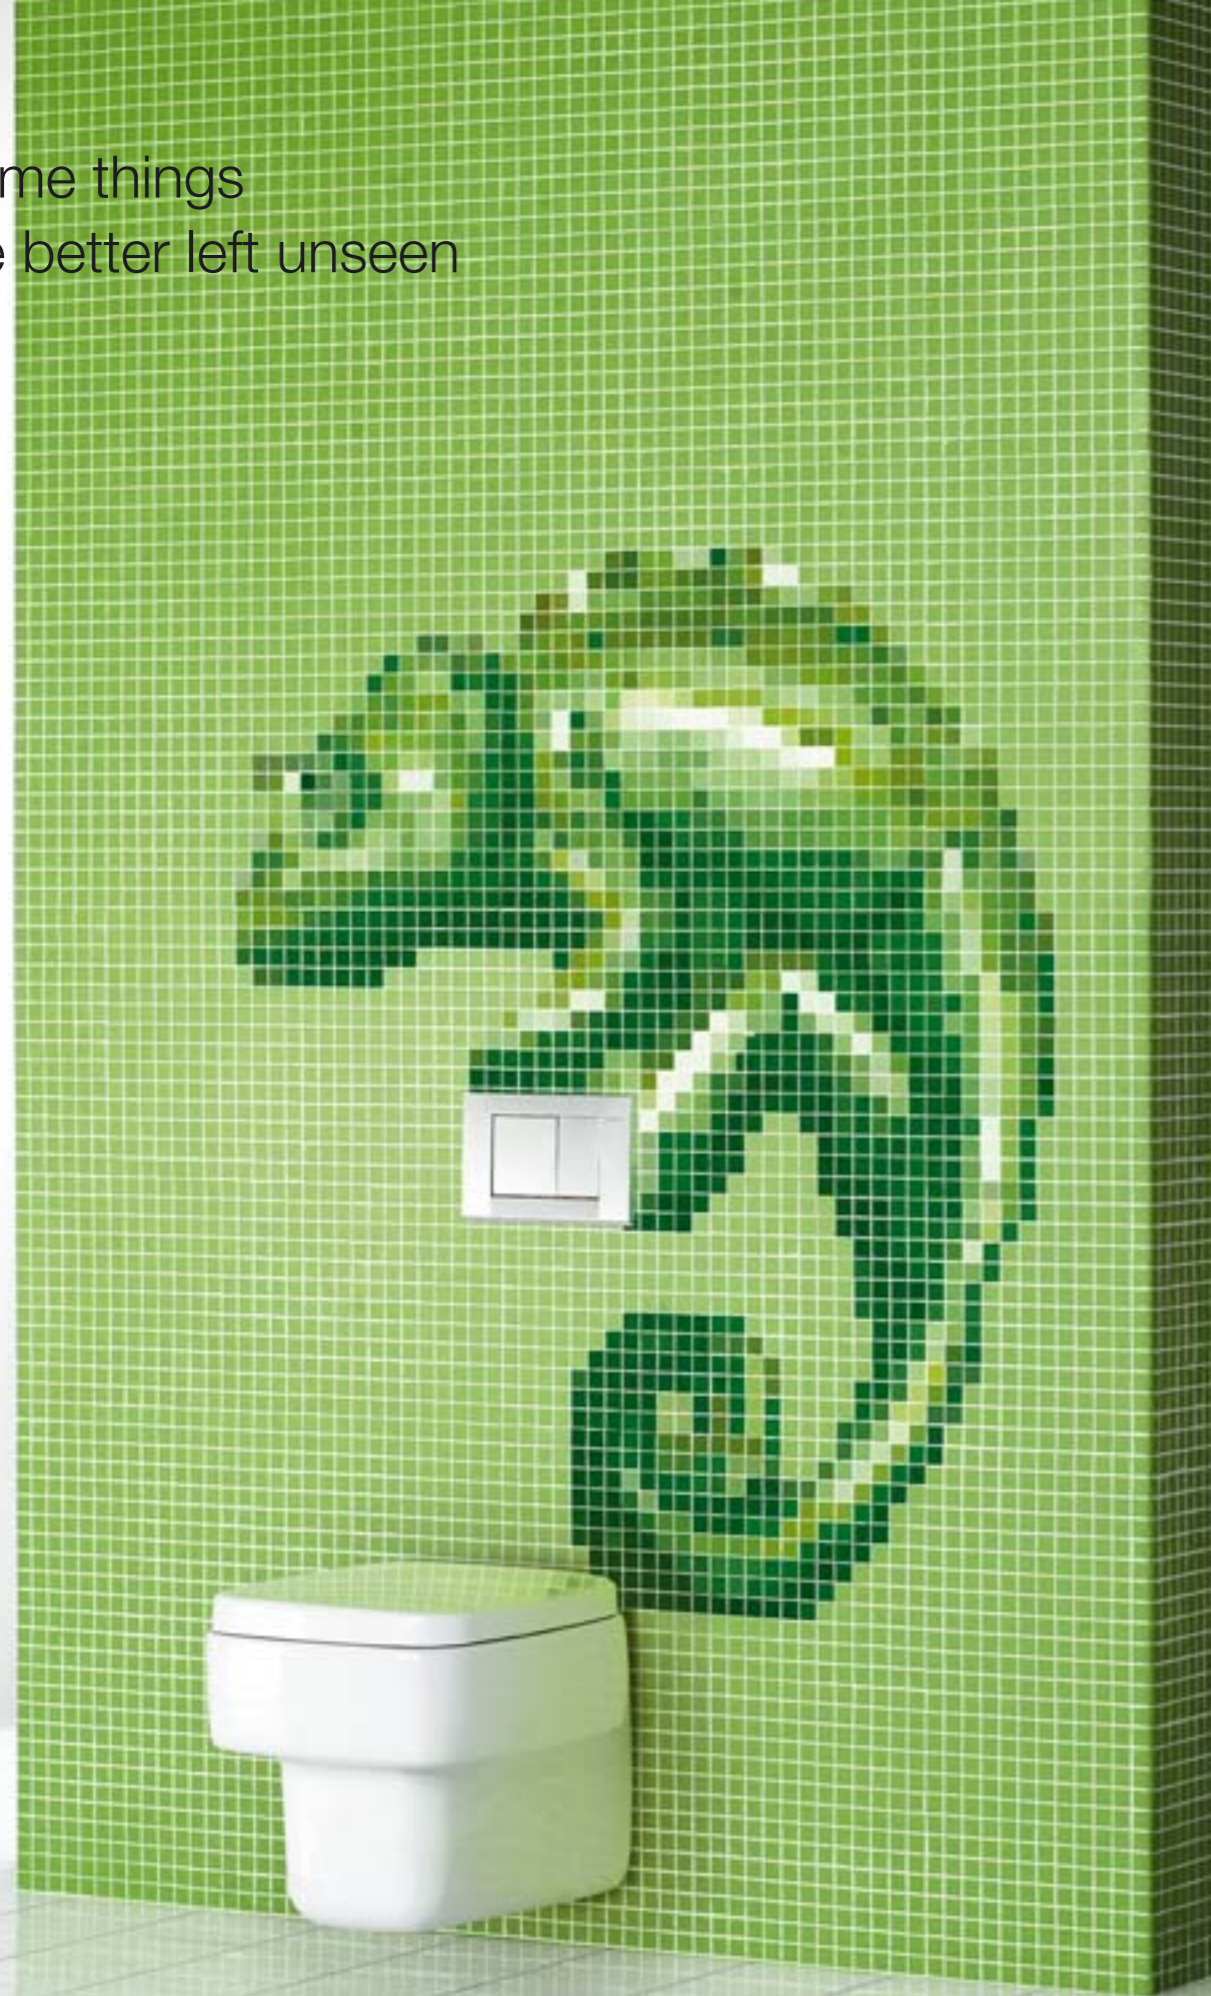

The system adapts to its environment and is ideal for non-standard, awkward spaces, such as loft bathrooms. Besides forming partitions in a standard room, it can also accommodate the quirks of non-standard spaces, such as the slanting roof of a loft. Such a bathroom has a

special character of its own, which the Geberit system works with – adding style and design.

Some things
are better left unseen

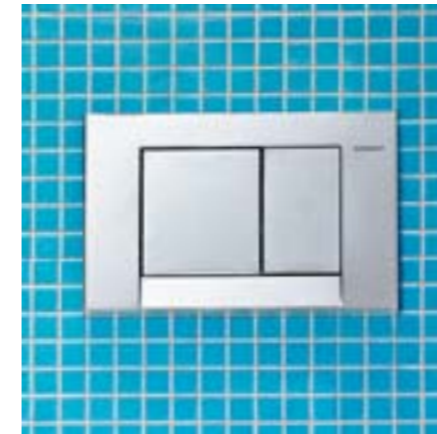

A wall-hung solution offers clean lines, clear surfaces and elegant beauty from floor to ceiling. You can even create a room-within-a-room effect by placing the wall creatively. And you don't have to break this effect – or the wall – to maintain it. The flush actuator can be removed

easily, providing quick access for all maintenance work – because who wants to look at pipes? Let yourself be swept away by the streamlined simplicity of the Geberit system.

Flush with style

Geberit's range of flush actuators come in different styles, flush options, colours and finishes to complement your bath-room. Made from durable plastic, diecast zinc or stain-less steel, they are built to withstand the toughest of bathroom environments and look stylish at the same time. Whether you like simple lines or a more designed finish, the actuators offer functionality that will survive being pushed time after time, or, if you don't want to touch the actuator, you can simply wave your hand and activate the infra-red sensor that will flush the toilet for you!
